SUMMARY

Cybersecurity and computer science graduate (East Stroudsburg University, May 2026) with hands-on experience implementing cryptographic algorithms, analyzing network defense and risk, and building applications with secure authentication and role-based access control.

EDUCATION

EAST STROUDSBURG UNIVERSITY
EAST STROUDSBURG, PA
Dean’s List
B.S. COMPUTER SCIENCE | B.S CYBER SECURITY
Graduated May 2026

COURSEWORK

Intro to Computer Cryptology
Computer Security II
Computer Security Admin & Policy
Intro to Cybersecurity
Networks and Data Communications
Operating Systems
Database Design
Linear Algebra
Data Structures and Algorithms

SKILLS

Security: Cryptography (AES, DES, RSA), Cryptanalysis, Risk Assessment, Network Segmentation, Authentication, RBAC
Tools: Nmap, Linux (Ubuntu), Bash, Docker, Git, Visual Studio
Languages: C++, C, Python, C#, SQL, Assembly, Swift
Other: Secure credential storage, Debugging, UML

EXPERIENCE

East Stroudsburg University – Cryptography Internship (CPSC 487)
January 2026 – May 2026

- Developed software to encrypt, decrypt and cryptanalyze classical and modern ciphers: Caesar, Vigenère, Hill, MDES, Triple DES and S-AES
- Applied frequency analysis, brute-force and known-plaintext attacks to show weaknesses of historical ciphers
- Authored a paper surveying common cryptology ciphers with tested results

Neofortunity Internship – Frontend Developer Intern
January 2026 – August 2026 | Remote

- Built SwiftUI views and models (MVVM) for an iOS app over an 8-month internship, including role-specific user flows
- Connected UI to Firebase/Firestore CRUD functions with the backend developer

Army National Guard – Aviation Operations Specialist (15P)
2019 – 2023

- Used physical and digital controls to monitor flights and respond to emergencies in high pressure environments
- Completed the Basic Leadership Course

PROJECTS

AES-CBC Implementation

- Implemented AES-128 in CBC mode for multi-block messages
- Analyzed how ciphertext corruption propagates through decryption

RSA Key Generation (C++)

- Generated keys with a prime sieve, extended Euclidean algorithm and fast modular exponentiation

IoMT Security Research Paper

- Researched risks to medical device networks and defenses such as segmentation and encryption
