SUMMARY

Full-stack .NET developer with a background in computer science and cybersecurity, experienced in designing and building secure end-to-end applications, including C# backends, relational databases, authentication flows, and responsive frontends.

EDUCATION

EAST STROUDSBURG UNIVERSITY
EAST STROUDSBURG, PA
Dean’s List
B.S. COMPUTER SCIENCE | B.S CYBER SECURITY
Graduated May 2026

COURSEWORK

Data Structures and Algorithms
Software Engineering
Database Design
Programming Languages
Operating Systems
Networks and Data Communications
Computer Organization & Architecture
Intro to Programming II
Intro to Cybersecurity II

SKILLS

Languages: C#, SQL, JavaScript, Python, Java, Swift, C/C++
Backend: .NET, REST APIs, GraphQL, SQLite, MSSQL, Firebase
Frontend: React, HTML, CSS, .NET MAUI, SwiftUI
Security: Authentication, RBAC, Secure credentials
Tools: Visual Studio, Docker, Git, Xcode, Linux, PlantUML

EXPERIENCE

Neofortunity Internship – Frontend Developer Intern
January 2026 – August 2026 | Remote

- Developed the frontend of an iOS volunteer-board app in Swift and SwiftUI using MVVM architecture
- Worked with the backend developer to wire UI components to Firebase/Firestore CRUD operations
- Designed application and role-based user flows for an 8-month team project
- Improved application stability through debugging and version control fixes

Army National Guard – Aviation Operations Specialist (15P)
2019 – 2023

- Managed operational systems and ensured safety in high pressure environments

Direct Service-Learning Level 2 – Frontend
Cherry Valley National Wildlife Refuge | Fall 2024

- Built conceptual events and landing pages in HTML and CSS

PROJECTS

Full-Stack E-Commerce Platform

- Designed and implemented backend using SQLite and .NET
- Built authentication, role-based access control, and admin workflows
- Developed cart, checkout, login, register, order, seller and admin moderation systems
- Created UML diagrams to explain the system to all team members

Mechanic Shop Database System

- Built a C# .NET employee portal in Visual Studio backed by an MSSQL Server instance running in Docker
- Implemented appointment scheduling linking customers, cars, mechanics and services
- Wrote SQL functions powering analytics shown in a data grid view

Ai Job Application Agent

- Automated job applications using the Claude API and RapidAPI, generating cover letters scored against job descriptions
- Secured API keys via environment variables excluded from version control
